Analysts Meeting Followup — 3 September 78

1. Gene to lay out plant material for peas and carrots Monday A.M.
2. Gene lay out plant material for gardens Monday A.M.
3. Russell to test the compost for oil — see if too detrimental.
4. Test plant 1 row of radishes in the oil-soaked compost area.
5. Jack make order for Tampala spinach from Yates in Glen.
6. Greens, cucumbers, lettuce, chines cabbage, eggplants, okra and radishes to go in garden with carrots in side area... green squash growing now in plenty.
7. Jocelyn pick outlass from #7.
8. Make arbors for the cucumbers and green squash—less fungus.
9. Check with radio to see when pullet chicks coming out.
10. Take list left for Jack by Rob Gieg, and followup on Anthony.
11. Citrus needs pruning and cutting of suckers from roots.
12. Tanya take over care of coffee—to receive training in this procedures.
13. Becky more on lab work with John Harris.
14. Papaya crew—Ginee Hewell, Dorothy, David Chalikin... verify with Jack.
15. Plant 3 papaya per hole then cut out males later.
16. Christian to complete re-survey of fields by #; Darrell tell him to see Gene for additional information Christian needs.
17. Johnny asked for copies of new farm plan, harvest calendar and planting schedule—Jack said Carolyn will get the information and make up the CAO copy.
18. To plant Cuban black beans; store others; to plant way up at coop does.
19. Dano put bananas back in ground if fall and prop with forked stick.
20. Cassava will crew to be re-established; select crew; tell Mary she should have been at meeting. This item was tabled.
21. List of analysts, supervisors and others who should attend Analysts to be given to fish prior to rally Tuesday night... warnings will be written.
22. Inspectors to write up corrections needed; copies to be given to dept. supervisors. This is not debatable as inspectors go through.
23. Jack will get with Albert and get the wheelbarrows arranged for, possibly order some wheels.
Farm Analysts Meeting
3 September 78

Planting

Got some of the plowing done today, first in long time. Gene to lay out plant material for the peanuts in the morning. Lay out the stuff for the garden. Plowed in a lot of pig shit this morning. However, was from the pig farm compost pile that had a lot of diesel on it. Preesedry commented he had noticed a lot of oil draining off of the stuff he got. When rains hit it. Tish commented that statewide they use diesel to kill weeds and grasses. Demosthenes confirmed this. He used a combination of diesel and kerosene, killing weeds for a year. Nothing grown when this is used as a rule. Russell said that most of the fertilizers are petroleum derivatives, may not be relevant.

Russell was to have checked the compost with the diesel to see if it could be used on gardens and he has not done this. Now it is in the garden. The resolution Gene suggested was to plant one row in radishes, a fast grower, and in 5 days we will know. Next we are not planted in the area where we have none of the compost.

Every Other Row in okra suggested Gene.

Tish had mentioned need for the salad greens. Carolyn Layton mentioned talking with Joyce T. on this. Analysts agreed to grow more salad greens. The shading will be needed for the lettuce. Will alternate with Chinese cabbage, which can also be used raw; is tender.

Tish asked about the kamas spinach which passes itself and can be eaten raw and does not have the comic acid crystals when eaten raw. Gene says he is growing this from Yates in GA. Need to place an order for some of the seeds.

Kamas is against pass and llamas. In the regular garden even though Paskie is having some success with them. These can later be tried in the intensive farming.

Russell said the melons are dying out now. Need to have more plant all agreed to this. Would like more beans or at least some stubble with the beans. Lettuce and cabbage don't do well in full sun. All agreed to get in more quick crops—are having to buy garden vegetables locally. Need shallots also. Cabbage thick; no. have some kale.

Greens, okra, lettuce, Chinese cabbage, eggplants, okra and melons to go in gardens with carrots in side area. Snow peas are beginning to be planted.

Gene said we got beans in the other garden; one crop only in the West side garden that is poor quality of the soil.

Cutlass

Jim says that we have enough cutlass beans in Field 7 for 5 bags. Maybe let Joyce 1 to check this and pick them.
Flowering
Mike T. is to plow three fields and Jan gave the order of this... first is the hill beside the soap factory.

Jocelyn feels should use the cutlass as a rotation crop and plow under after picking in about 4 months...as green fertilizer...
Presently is not in the farm plan. Seems to be a disagreement between Jan and Russell on this issue...

Cutlass subject to mosaids. Russell said only in small plots; he has not found this in fields. Jan said #5 on both sides were infected; Russell said was not that -- was an insect...is that thrive in dry weather.

Lettuce
Gene said what transplant, and lose lot of seed and transplant last in the afternoon on a wet day... Jan said use proper shading and won't be problem. Jan said best cues were on arbors and same with long green squash. Russell said it reduces the fungus, also other disease problems. 5thley to let Gene know how many flats he is to set out and the nursery will do it.

Poultry
Rob thinks is cleaner than has ever been... Russell said when he went there they had disinfect one of the chicken houses and was just as it should have been.

Feed problems. Jack thinks broiler starter best because doesn't increase the fat -- down to 24% bag ratio. James W. seemed to find formula so we don't later find our chickens in deficiency problems. Harris thinks they might have changed formula on some of this -- Rob is to check out when he is in town at the seminar on chicken raising. Leaving on boat today; will be in 0th 7-8 for seminar; will go rest of way on the steamer.

Bob is to leave list of what is to be done with Carolyn for Jack and Darrell to follow up.

Bob was instructed to have his hair trimmed neatly and go get some fairly nice clothing. Darrell to lend something and he can call New to warehouse.

Flowering
Mike T. to plow the two back fields, 1st at brick house, Field X, then #7 and then back field and old squash field Jack will show him. After yams out at 16, Mike needs to go in and push roots.

Gene wants springtime cultivator. Gene says no, will use it up.

Reports & Evaluations... being done by all supervisors. Allowing them to come in on Thursdays at 5:10 and start them since take a lot of time.

Inspectors
Question if they do not put more emphasis on fields of their own interest? Fish and Gene challenged. Jack had raised original question when Tom and Calenda and others had complained had no time to do their own maintenance as pool was pulling them away from their own area... see other adds also.

Gene had need a lot of pruning and massive growing all over the citrus. Gene said these trees all have to be cut back and pruned up. A lot have root suckers that need pruning... 25 days.

The citrus should now be moved into nursery rows and this will take a lot of time. Gene says citrus is Calenda's job. She said needs extra help to give them time handle.

Gene says when it comes to planting Papaya should be planted by people with experience... Calenda now has citrus, coffee,
mixed fruit and orchard. Formerly was with Jan and Becky who are not now doing this... Becky doing more lab on Dad's request and doing with John Harris... Jan is an inspector...

Jan, Becky, Gene and Calandra only knows citrus...

James Morrell thinks should take coffee from Calandra and let another handle this. Jan suggested Tanya... who agreed to it.

Papaya Crew

James Morrell says on the Papaya, Cincy Newell, Dorothy B..., and David Chaitkin should in his estimation be on this... Gena did not like this. Feels with landscaping will need them. But landscaping is nearly completed and should not require as much of his time... NOT RESOLVED... far as I could detect.

Coffee

Jan said right now Tanya has rice and pineapples. Calandra is getting her crops more centralized except for citrus out on roadside. The landscaping will be farther along... Mike will have to go in and take out the trees...

Papaya

Gena thought cassava and papaya in beneath that in 90 days... some places plant 3 per hole and later cut out the males and end up with better yield... Once up to where flower is showing is too big to transplant, and you end up with many big gaps in your field from the male plants.

Survey

Rob Christian still has not completed the resurvey he promised Jack for every field. Carolyn has paper on it... Darrell to tell Christian to get with Gene for some information Christian needs. CAO's to receive copy... Carolyn to make it up.

Beans

Jan was recently in and said planting beans even though it is late. Morrell said this has happened before and has only gotten 10% of expected crop... Jan said okay to try on the rubber black beans, feels other seed should be vacuum stored... all agreed to this. Jan said after talking to Calle Charan will have more input... want to see men at coop and he is doing very well with his crops. Does not plant beans as government says, and he is doing best of all around... Jan will learn his method and we will try this with the black beans.

Ryanas

Jan said that when Mike had done thru a field and had knocked down the tree he had just got out, stuck it back in ground and pruned it... it grew well. We will start to try this. Demosthenes agreed to this... will try and see.

Cassava Hill Crew—to be reestablished wants 7 persons... Tanya said Wanda Souder, Loretha Buckley, Tei Fornella and Cleveland Newell were mentioned by Mary. TARRED BECAUSE MARY WAS NOT HERE. SHE SHOULD

JACK BEAN. HAY! A WARNING...

Others not attending as they should be. Darrell is to give list of persons who should be here—analysts, supervisors and others who should be here every time; roll will be taken and unexcused absences will be given warnings in rally.

John Harris—item on agenda and he is not here. JOHN HARRIS TO BE GIVEN WARNING FOR BEING ABSENT... WAS PASSED SEVERAL TIMES SAID JACK. John's agenda item was tabled to next meeting.
Inspectors: Give copies of their reports to Carolyn who types extra copies for the supervisors. Decision best that inspectors not debate what they find with supervisors; write their reports as they see it independently and turn them in.

Last time in which corrections are to be made. Warning if not done. John will help them schedule the time to get it done with a crew.

Wheelbarrows needed said Demerathes — Jack will get with Albert and make decision how best to either make them, buy wheels, etc., but will see it gets done.
